

Screen Fabricator V05 Pilot Testing Guide

Thank you for testing Screen Fabricator V05. Estimated time: 10–15 minutes.

Purpose

Screen Fabricator is a prototype application designed to help clinicians create, test, and administer custom mental health screening and triage workflows without programming expertise.

Suggested Tasks

1. Build a simple mental health screening tool.
2. Configure symptom-elevation thresholds.
3. Configure at least one critical safety item.
4. Use the tool and calculate results.
5. Review the output and recommendations.

Feedback Questions

6. Did you find anything confusing, unintuitive, or overly complicated?
7. Did you encounter any bugs or unexpected behaviour?
8. What is the single most useful improvement you would make?
9. Any other comments or suggestions?

Notes

Please feel free to reply with brief comments, bullet points, or even a single sentence. All feedback is appreciated.
